

**Researchers
at the University of California, Irvine
are seeking Type I diabetic adults and healthy controls
to participate in a study looking at biomarkers of
glucose metabolism in exhaled breath.**

- 2 sessions at UCI Hewitt Hall (main campus)
- First session includes: blood sugar and insulin manipulation to maintain specific glucose levels (normal and high), measurements of exhaled breath, and blood sampling.
- Second session includes (session only for Type I diabetics): same as session one except additional insulin manipulation to reproduce insulin levels similar to non-diabetics.

**Participants Needed:
Type I Diabetic Adults and Healthy Controls 18-40
years old.**

Volunteers will receive up to \$200 compensation for completing both sessions.
