

A brief
introduction
for people
with diabetes¹

It's here! **Gvoke HypoPen™**,
the first premixed autoinjector
for very low blood sugar.^{1,2}

Oh no! My
blood sugar
is dropping
really low.

Count on me to
bring it back up.¹

Gvoke HypoPen is a prescription medicine used to treat very low blood sugar in adults and kids with diabetes ages 2 and above.¹

See Important Safety Information on last page.

The simple solution you can count on.¹⁻³

Gvoke HypoPen is the first-ever autoinjector for very low blood sugar. It is premixed and ready to go, with no visible needle. That means it's easy to use!¹⁻³

99% of people were able to use Gvoke HypoPen correctly, in a study.⁴

I'm easy to use and it's easy to know you did it right.¹⁻³

Reliable delivery that's proven to work.^{1,2}

Gvoke HypoPen helps take the guesswork out of managing a very low blood sugar event.^{1,2}

In clinical trials:

99% of adults and **100% of kids** had their blood sugar raised to safe levels.^{1,5}

2 premeasured dosing options available.

Anyone can use it in two simple steps.^{2,3}

Pull red cap off.

Push yellow end down on skin and hold 5 seconds. Window will turn **red**.

Administer into upper arm, stomach, or thigh.

After using Gvoke HypoPen, turn person on their side if they have passed out or are seizing. Call for emergency help.³

INDICATION AND SAFETY SUMMARY

GVOKE is a prescription medicine used to treat very low blood sugar (severe hypoglycemia) in adults and kids with diabetes ages 2 years and above. It is not known if GVOKE is safe and effective in children under 2 years of age.

WARNINGS

Do not use GVOKE if:

- you have a tumor in the gland on top of your kidneys (adrenal gland), called a pheochromocytoma.
- you have a tumor in your pancreas, called either an insulinoma or a glucagonoma.
- you are allergic to glucagon or any other inactive ingredient in GVOKE.

GVOKE MAY CAUSE SERIOUS SIDE EFFECTS, INCLUDING:

High blood pressure. GVOKE can cause high blood pressure in certain people with tumors in their adrenal glands.

Low blood sugar. GVOKE can cause low blood sugar in certain people with tumors in their pancreas.

Serious skin rash. GVOKE can cause a serious skin rash in certain people with a tumor in their pancreas called a glucagonoma.

Serious allergic reaction. Call your doctor or **get medical help right away** if you have a serious allergic reaction including:

- rash
- difficulty breathing
- low blood pressure

COMMON SIDE EFFECTS

The most common side effects of GVOKE include:

- nausea
- vomiting
- swelling at the injection site
- headache

These are not all the possible side effects of GVOKE. For more information, ask your doctor. Call your doctor for medical advice about side effects.

You are encouraged to report side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch, or call 1-800-FDA-1088.

BEFORE USING

Before using GVOKE, tell your doctor about all your medical conditions, including if you:

- have a tumor in your pancreas
- have not had food or water for a long time (prolonged fasting or starvation)

Tell your doctor about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements.

HOW TO USE

- Read the detailed Instructions For Use that come with GVOKE.
- Make sure your caregiver knows where you keep your GVOKE and how to use GVOKE correctly before you need their help.
- Your doctor will tell you how and when to use GVOKE.
- GVOKE contains only 1 dose of medicine and cannot be reused.
- After administering GVOKE, the caregiver should call for emergency medical help right away.
- If the person does not respond after 15 minutes, another dose may be given.
- Tell your doctor each time you use GVOKE.
- Store GVOKE at temperatures between 68°F and 77°F. Do not keep it in the refrigerator or let it freeze.
- Keep GVOKE in the foil pouch until you are ready to use it.

Keep GVOKE and all medicines out of the reach of children.
