5. Hanas R, Adolfsson P, Elfvin-Akesson K et al. Indwelling catheters used from the onset of diabetes decrease injection pain and pre-injection anxiety. *J Pediatr*. 2002;140(3):315-320

6. Rabbone I, Bobbio A, Di Gianni V, Sacchetti C, Cerutti F. Intensive insulin therapy in pre-school-aged diabetic children from multiple daily injections to continuous subcutaneous insulin infusion through indwelling catheters. *J Endocrinol Invest*. 2008;3 (3):193-195

## LIFE WITH i-PORT ADVANCE INJECTION PORT

**Before:** Chris was on four injections per day and rarely snacked to avoid extra skin pokes.

**After:** Chris is able to snack and have fun again. It's a piece of mind for the whole family.

*"I honestly wish this option was given day one in the ER... The shots are the scariest thing..."*

- Carin, mom of Chris, 12-year-old with type 1

i-Port Advance™  
injection port

## GREAT PATIENT EXPERIENCES

**IMPORTANT SAFETY INFORMATION:** i-Port Advance injection port is prescription-indicated for patients who administer, or to whom is administered, multiple daily subcutaneous injections of physician prescribed medications, including insulin. The device may remain in place for up to 72 hours to accommodate multiple drug injections without the discomfort of additional needle sticks. Site infection and/or irritation is a risk. Patients experiencing such symptoms should immediately consult their healthcare provider and/or discontinue use. For complete details, please consult i-Port Advance product user guide.
